The following specifications, which differ from the specifications in the operating instructions, apply to the power tool you have purchased.

Rapid Shut-off (KickBack Control)

The rapid shut-off function (KickBack Control) gives the user greater control over the power tool and offers them better protection than power tools that do not have KickBack Control. The power tool will switch off if it suddenly and unforeseeably rotates around the drilling axis.

To **switch the tool back on**, release the on/off switch and then press it again twice.

- **It will no longer be possible to switch the power tool on if the KickBack Control function is faulty. Have the power tool serviced by a qualified repair person using only original replacement parts.**
